## EXPERIENCE

### Berkeley Speech and Computation Lab

*Undergraduate Research Assistant | PI: Gašper Beguš*

Berkeley, CA

November 2020 to December 2021

- Probed intermediate representations of speech in generative adversarial networks
- Compared intermediate representations in GANs with the auditory brainstem response via latent vector recovery of recorded stimuli

## Berkeley Division of Data Science

Research Apprentice | Mentor: Taka'aki Taira

Berkeley, CA

January 2019 to January 2020

- Recovered underlying stress fields from earthquake data using weighted least squares
- Created scripts to calculate and visualize information about the faulting regime, stress orientation, and confidence level of stress fields across Northern California

## PROJECTS

---

### F-ZERO Reinforcement Learning

A reinforcement learning agent trained to play the SNES racing game F-ZERO

(GitHub [↗](#))

- Utilized socket programming to allow an emulator with Lua scripting capabilities to interface with Python and PyTorch
- Used deep Q-learning to create an agent capable of racing in a 3D environment given only screen input

### Markov Bot

A Discord bot that creates Markov chains out of user messages in order to simulate text.

(GitHub [↗](#))

- Developed a means to construct Markov chains for individual users, and to generate novel sentences using constructed chains
